CLOSURE SUMMARY REPORT FOR IR SITE 6 (OLD ARMY SEWAGE TREATMENT PLANT) AND IR SITE 64 (MARINE PALM HOUSING AREA), DECEMBER 2007

Dear Major Clausen:

The Department of Toxic Substances Control (DTSC) has completed the review of the subject document. Installation Restoration (IR) Site 64 occupies the same horizontal footprint as IR Site 6, the former wastewater treatment facility. The wastewater treatment facility was removed in 1953 and a portion of the Marine Palm Housing area was constructed on the site. The site occupies approximately 40 acres.

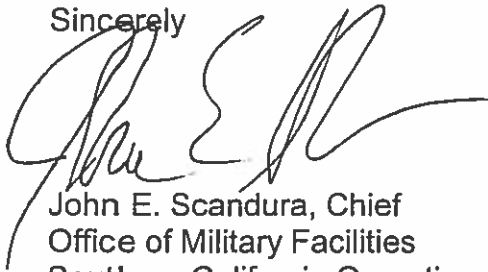

A removal site evaluation (RSE) was conducted at the site in 2001. A subsequent non-time critical removal action was conducted in 2003 to address the presence of polychlorinated biphenyls (PCB) and chlordane. In March 2006, additional sampling was conducted to confirm concentration of PCB is within acceptable health risk level. In November 2007, additional excavation of hot spots and confirmation sampling was conducted to remove remaining concentration of PCB and chlordane to within acceptable health based risk levels.

The result of the risk assessment showed that the removal actions effectively lowered the risk posed by hazardous constituents in the soil to acceptable health based risk levels. Therefore, DTSC concurs with a no further action determination for the soil at Site 64.

Major Milton J. Clausen, Jr.
